Sample Case of AWS : Engineering and Trading M Company

Background of Requirement

- They used to use Thai domestic web hosting services.
  The Japan head office scrutinized the vulnerability for the company website.
  Then many security holes were found and pointed out.

- After the test result reported, they asked the hosting company to solve it but no support was provided.

- The existing company website is composed of CMS and MySQL

Concept Proposal

- MAT proposed migration system which includes security support on AWS services.

- MAT architected well secured website on Linux server with using RDS.

- SSL certificate which old website were not used is installed.

- The Japan head office checked website vulnerability again but they commented no threats were found and a good review.
